

Increase business opportunities with Quinnox's Calypso Upgrade Services

In the Capital Markets industry, trading applications are considered to be the backbone of the organizational system. The organizations use these applications to drive decision making towards achieving business objectives. They strive to gain advantage through upgrades and new features for additional efficiencies.

Upgrades today involve more than just software and also include customizations, interfaces, reports and technical dependencies, as well as business processes and users. Organizations need high-quality releases with rich features that drive improvements for better and optimized business opportunities.

Quinnox is committed to serving the needs of Capital Market industry with a combination of high-quality releases, built-for-organization features and Upgrade Services. With strong designs that maximize and monitor performance, our extremely skilled specialists who are involved in the engagement right from the beginning would facilitate and ensure that our clients move smoothly from Version "X" to "Y" towards accomplishing optimal business performance.

Key drivers for an Upgrade

The key objectives for an organization to upgrade its existing Calypso application to a higher version are:

- To achieve increased business proportionate to the investment made in cost, time and resources
- To leverage new and advanced functionalities, "out-of-the-box" solutions with lower maintenance, thus increasing business opportunities
- To facilitate regulatory compliance at lower costs through retiring customizations
- To capitalize on the latest technologies / system resources
- To improve the performance of the system and productivity of the business users.

Advantages

- Detailed verification and comparison reports provided
- Availability of functional expertise to custom-fit new functionality
- Availability of technical expertise to retro-fit customizations
- Improved Productivity and maximum ROI
- Establish a platform with the latest technology stack
- Eliminate some of the existing customizations, resulting in less maintenance.
