INTEGRATED
Digital Enterprise

A Business Imperative

SAP Partner

The evolution of digital technology presents opportunities and threats for all businesses.

90% of CEOs believe the digital economy is transformative but less than **15%** are executing a holistic digital strategy across the enterprise*. Among the many questions, the following are essential:

- How do you find the right enterprise-wide digital platform that is scalable and future-ready?
- How do you leverage your data to disrupt the industry and outmaneuver the competition?
- How do you enable the concepts like AI, ML, and RPA so that they genuinely drive the business?
- How can organizations drive innovation and support end-to-end business transformation?
- In other words, how can we move past the status quo and embrace innovation and change?

Quinnox is addressing these opportunities and challenges through the Integrated Digital Enterprise – a platform which builds on the SAP core and provides a framework for rapid prototyping, technical tools and digital processes that scale innovation to meet real-world business opportunities. Cloud-based services and applications have become a reality, IoT is gaining ground, big data and analytics are uncovering profound insights and trends, and now AI & ML are making rapid inroads. These technologies can transform your enterprise when deployed correctly and combined in an integrated solution.

Why is the Integrated Digital Enterprise a business imperative?

Organizations are changing at the core. Disruption is the new business model. Customer experience and employee engagement are radically influencing business design. The Integrated Digital Enterprise is all about ready to use architectures so organizations can rapidly innovate and integrate. Integrated Digital Enterprise also enables organizations to quickly respond to the changing market conditions with its modular components that are instantly accessible via the public cloud.

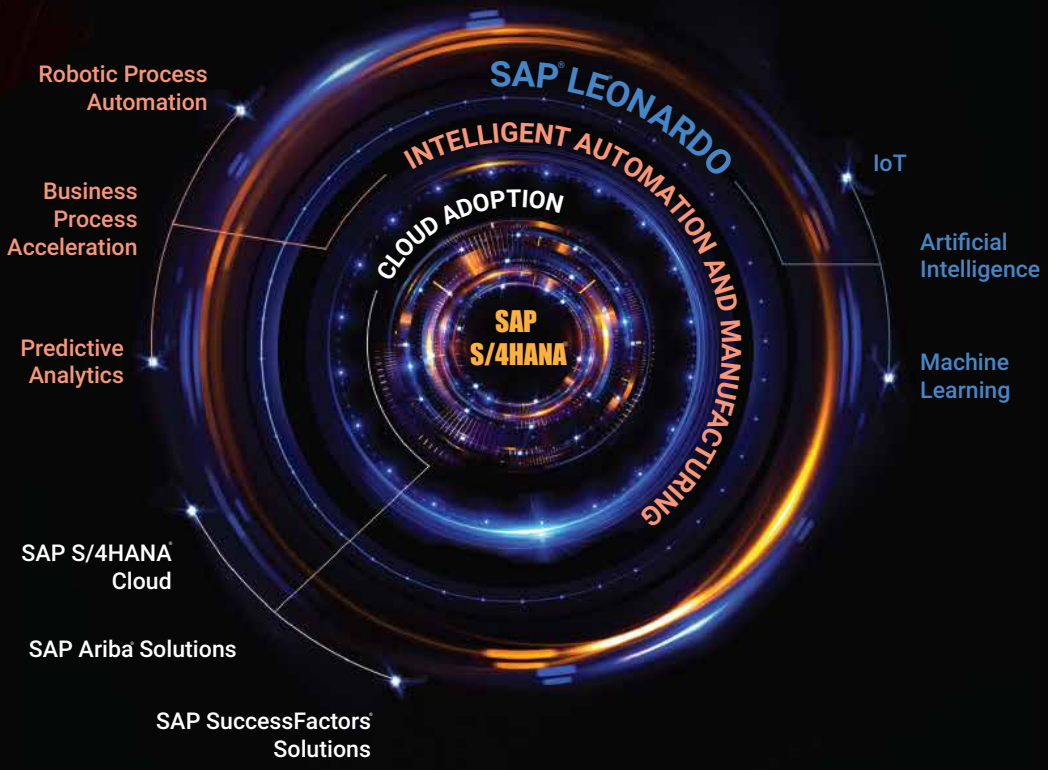
Quinnox Integrated Digital Enterprise

is a future-ready Enterprise Platform that utilizes the SAP S/4HANA foundation. The platform brings digital capabilities through a pace-layered model and a 'cloud first' principle. Accompanying technologies include AI, ML, RPA, and IOT. The approach provides more than mere access to these technologies and instead involves an innovation-led methodology designed to transform the way enterprises do business. Instead of forcing companies to find, integrate, and manage their tools, the Quinnox Integrated Digital Enterprise, via design thinking and the services of SAP S/4HANA Cloud Platform, provides a standard process, methodology, and innovation platform to implement new ideas quickly.

What does the

Quinnox Integrated Digital Enterprise bring to you?

Using the SAP S/4HANA foundation, the Quinnox Integrated Digital Enterprise brings core services for innovation.



The SAP S/4HANA platform in conjunction with the Quinnox "Integrated Digital Enterprise" is a pathway to digital, transforming your business goals and adopting newer business models.

Comprehensive **SAP** services to meet the present and future needs of businesses

The Quinnox Integrated Digital Enterprise helps you to gain the fullest potential from your SAP ecosystem.
